

### Diagnostic and Therapeutic Procedures I

Focuses on the purpose, implementation, and evaluation of equipment and procedures used in the diagnosis and therapeutic management of patients with cardiopulmonary disease. Explores baseline personal health as it relates to the development and recognition of respiratory diseases or disorders. Prerequisites: Completion of the Health Science Career Studies Certificate Respiratory Therapy pathway and acceptance into pre-clinical courses. Lecture 1 hour per week. Laboratory 3 hours per week. Total 4 hours per week.

The respiratory care practitioner is a primary care provider for patients with cardiopulmonary disease and complications. The practitioner must have an expert understanding of the purpose, implementation, evaluation, and modification of all equipment and procedures used in the management, diagnosis, and assessment of patients receiving respiratory care. This course teaches the basic assessment concepts required of respiratory care practitioners.

Prerequisites: Completion of the Health Science Career Studies Certificate Respiratory Therapy pathway and acceptance into pre-clinical courses

Upon completing the course, the student will be able to

- a. Develop or refine personal wellness goals by applying principles, definitions, and concepts of respiratory care related to disease prevention, wellness, and health promotion based on ethical, social, cultural, racial, and spiritual factors;
